

Roberto Milani

Roberto Milani obtained a joint PhD degree in Structure and Dynamics of Reactive Systems at the University of Lille I (France) and in Materials Science and Engineering at the University of Padova (Italy) in 2008.

He has been an invited Post-doc in 2009 at the University of Lille I and in 2010 at VTT Technical Research Centre of Finland, where he currently works as a Research Scientist.

His research interests include supramolecular chemistry, biomimetic and hybrid materials, and surface functionalization. His current projects mainly involve the preparation of fluorous dispersions by using natural and chemically modified surfactant proteins, as well as the study of halogen bonding interactions in polymeric self-assemblies and biological systems.
